## The Express and Flex business models require unique and specialized tools

### Customer Service:

**Service Unit Screen** – Manages all cash adds, removes and verifies along with complete diagnostics for each device.

**Event Logs** – Tracks all terminal activity to assist in problem resolution after an event.

**Server Alerts** – Automatic popup alerts with problem identification and resolution.

**Email Alerts** – Automatic notification if a service event or system error occurs.

**Call Center** – Keeping your investment and business operating at peak performance, the call center is designed around the Information Technology Infrastructure Library (ITIL). ITIL defines the organization structure, skill requirements and management practices necessary to manage information technology. ICS offers operators a choice of 3 different levels of customer service, tailored to their business needs and internal technical resources. The call center is staffed 7 days a week; we are there when you need us.

### Upgrade software:

Integrating the **Auto Sentry flex** with the **Tunnel Master® Management System** provides a much more powerful and feature-rich solution. Cash control, cash management, sales and marketing tools are all enhanced to deliver a better customer experience and an improved bottom line.

### Improved Cash Control:

**Integrated Reporting** – Combine all daily shifts for easy reconciliation.

**Wash to Register Comparisons** – Ensure you are paid for all wash services provided.

**Controlling Edits** – The point of sale at the entrance of the tunnel manages adds, removes and edits from the stack. The cash management system accounts for all service changes.

### Unique Cash Management Needs:

**Realtime Cash Balances** – Cash Management allows you to know cash on hand by device and by denomination.

**Partial Deposits** – \$1's removed from the **Auto Sentry's** bill acceptor typically go back into an **Auto Sentry®** and larger bills are converted to \$1's and used in bill dispensers.

**Mid-Shift Servicing** – Most of the cash servicing occurs during the shift, not after the shift.

**Multi-point Cash Tracking** – Utilizing the Virtual Safe, the **Tunnel Master®** system manages cash between **Auto Sentry®** terminals, POS devices, cash-on-hand conversions, and bank transfers.

**Customizable** – The software offers 3 different ways to manage your cash. Select the method that best fits your business needs.

### Sales Tools:

**User Interface** – A robust user interface with video and audio quickly walks the customer through the sales process.

**Smart Upsells** – Target upsells by service selection.

**Profiles** – Change your services and pricing by time or customer.

**Fleets** – Change profile by fleet account. Police pay less, are not offered wax and don't pay sales tax.

**Fundraising Tools** – Use the **Auto Sentry** to track wash activity for non-profits.

**Oversized Vehicle Profile** – Change services and pricing for larger vehicles.

**Vehicle identification with Auto Passport** – Vehicle identification can change profiles, identify fleets and members.

**Frequency Promotion** – Have the **Auto Sentry®** print a customer receipt that offers a discounted wash code for a quick return visit.

**Improved Flexibility** – Fixed or portable Point-of-Sale devices in an **Auto Sentry®** lane operate as an attended lane or as a backup.

### Marketing Tools:

**Video Greeting** – A consistent and customizable message to greet each customer and educate them to your services.

**Custom Buttons and Backgrounds** – Brand your wash by matching signage, colors and product offerings.

**Custom Videos for the Sales Process** – Educate your customers to your unique service offerings.
